

# Mobility 2050

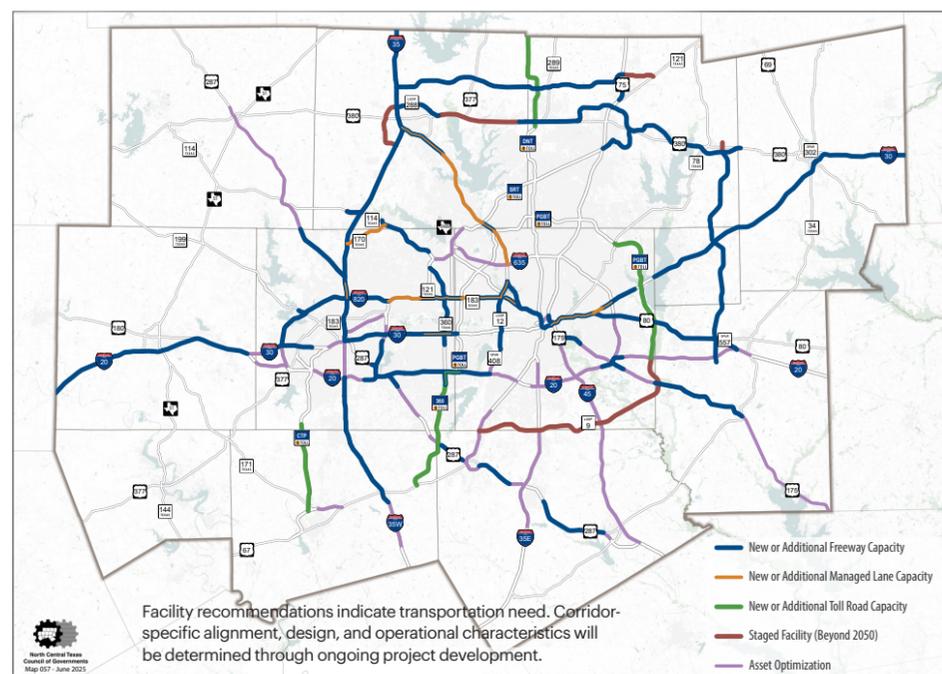

Mobility 2050 serves as a fiscally responsible blueprint for the region's long-term multimodal transportation needs. The plan was adopted by the Regional Transportation Council in 2025 providing a range of transportation options to serve Dallas-Fort Worth now and 20-plus years into the future.

As the region grows from more than 8.3 million residents today to an estimated 12.2 million by 2050, it will require an integrated, easily navigable transportation system comprising roads, public transportation, bicycle and pedestrian facilities, and empowering technologies. Local policies and programs to enhance infrastructure investment will result in even more publicly accessible options. Mobility 2050 details transportation choices for the traveling public and for improving the quality of life in order to manage the region's growth.

## Funded Recommendations

Mobility 2050 represents a blueprint for the continued maintenance and development of the regional transportation system over the next 20-plus years. Mobility 2050 complies with all federal requirements related to the financial aspects of the metropolitan transportation plan. As the Dallas-Fort Worth region continues to grow, additional solutions will be imperative to comprehensively address the ever-increasing transportation needs.
